### Energy Systems & Installation and Syncarpha Capital Announce Co-Development Deal for 20 Megawatts of Commercial Solar Projects

*New York Based Syncarpha Capital and Energy Systems & Installation Aim for 100 Million Dollars in Project Development over the Next Five Years*

Jonestown, Pa. (Dec. 16, 2010) – Energy Systems & Installation (ESI), an alternative energy firm located in Jonestown, PA announced today a multi-year project development partnership with Syncarpha Capital of New York, NY to develop and install 20 megawatts of solar photovoltaic projects throughout the northeast and Mid-Atlantic regions.

According to Corey Wolff, CEO of ESI, “ESI is an experienced Solar EPC (Engineering Procurement Construction) company with the ability to develop and manage multiple large solar projects simultaneously. This partnership gives us the financial resources to seek out new larger scale ventures that otherwise would not have the funding mechanism to move forward. Typically, we look for projects above 500 kilowatts. They make the most sense financially for our partners and our clients.”

One of Syncarpha’s managing partners and co-founder, Cliff Chapman spoke to Syncarpha Capital’s mission and their partnership with ESI: “At Syncarpha Capital, our goal is to remove the roadblocks to widespread adoption of solar energy. We are typically involved in structuring sustainable energy projects for commercial/industrial companies, municipalities and schools, as well as utilities that want to diversify their grid with alternative energy.”

Mr. Chapman further commented, “As an investor and PPA provider, Syncarpha Capital has the expertise to structure a PPA that is compelling for the host customer. In many cases PPAs are the most cost-effective way for companies with strong balance sheets to go solar.

Under the agreement with ESI, we will provide the financing for approved projects while partnering with ESI to build, operate and maintain the solar systems. This results in the host company having no upfront capital investment, no operating or maintenance costs in addition to a greener corporate image. The final equation equals enhanced ROI with no ownership risk.”

Both principals credited green technology advisory firm Van Acker Associates, LLC of Bloomfield Hills, MI for seeing the synergies between ESI and Syncarpha Capital and bringing them together to develop this partnership.

*About Energy Systems & Installation, Inc. (ESI)*

ESI is a commercial-scale integrator that assists companies with the design, finance, purchase, and installation of renewable energy systems. ESI has worked with municipalities, large companies, and agribusinesses to incorporate cost-effective green technologies into their operations.

ESI also plays a key role in the education and job training of renewable energies. The company has partnered with Harrisburg Area Community College to provide certified training courses in solar and other alternative energy technologies.

ESI is located in Jonestown, Lebanon County, and can be reached at 717-861-4012 or [www.esisolarpower.com](http://www.esisolarpower.com).

*About Syncarpha Capital and the Syncarpha Solar Project Fund, LLC*

Syncarpha Capital is an investment company launched to capitalize on the tremendous opportunities in the alternative energy sector.

At Syncarpha, we have expertise in both the financial and renewable energy fields. Our knowledge of the solar supply chain and project development gives us broad access and critical insight into this expanding market. On the financial side, our principals have been successful in founding, managing and growing several operating businesses and investment companies.

Syncarpha is located in New York, NY and can be reached at 212-419-4844 or [www.syncarpha.com](http://www.syncarpha.com)
